- DARK GREEN

ALL SEASON SUPER SPORT TURF

A new player has exploded onto the sports turf scene! **365ss** is a revolutionary new bluegrass blend that offers the best of what sports turf professionals demand. **365ss** is extremely fast to germinate and establish creating a dense sward with superior sod strength. **365ss** is dark green with excellent turf quality and produces a beautiful field that looks as good on television as it does in person. **365ss** also holds up to extreme wear and traffic, recovering quickly between games and allowing for more. If you want different choose the competitors product...if you want the best choose **365ss!**

365ss combines the unique properties of 3 top-rated bluegrass varieties. Bolt, Legend and Blue Note consistently rank high in NTEP trials and when combined create a better overall product with superior performance than other similar blends.

365ss is ideal for sod production, sports fields, home lawns and can be overseeded into dormant bermudagrass for the ultimate BLUEMUDA turf. If you need the ultimate bluegrass blend that is highly wear-tolerant, dark green, and dense, choose 365ss.

This piece of sod, cut from the field, shows the tremendous amount of root growth and rhizome formation that provides 365ss its extreme wear tolerance. This field was less than 7 months old when played on.

SEEDING For most applications, 365ss should be sown at 2-4 lbs per 1000 sq. ft. or 100-175 lbs per acre. Consistent watering is very important until after the first cutting. 365ss is ideal for renovating existing turf that has been damaged or thinned by disease or wear. Overseed at 1 1/2 to 2 1/2 lbs per 1000 sq. ft.

MAINTENANCE 365ss is versatile, growing well in both full and partial shade, and under both high and low maintenance programs. Mow as necessary, removing no more than 1/3 of the leaf. 365ss can be maintained at 1/2" height when adequate moisture and nutrients are available. At a minimum, fertilize annually with 2 to 3 lbs of nitrogen per 1000 sq. ft. in a balanced formulation. More intensive programs produce a denser, more attractive turf.
